

Moving to GitHub

Troy Hunt

@troyhunt | www.troyhunt.com

Overview

Source control is a pivotal part of good software development

But they're not all created equal!

It's *very* easy to get the project versioned

This is especially important for this course

Why GitHub?

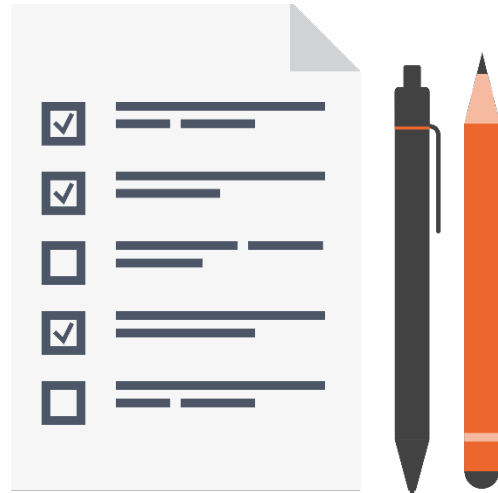

It's ubiquitous

It gets the project
into Git

It's accessible by
everyone

Azure can deploy
from it

Summary

Always get your code under source control before making changes

Git and GitHub are a fantastic combo!

Use `.gitignore` to keep the repo clean

Publish to a central, common service
