

Setting up Slots and Staged Deployment from Source Control

Troy Hunt

@troyhunt | www.troyhunt.com

Overview

We'll start testing deployments before making them live

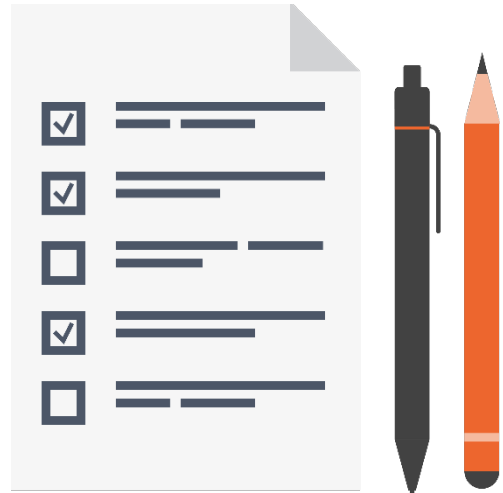

Deployment will also be fully automated via GitHub

We're going to make managing sites and deployments *fast!*

Why Deploy From Source Control

- Absolute confidence live code is under source control
- Assurance that code from all developers is integrated
- No chance of a “partial deployment”
- Repeatable, predictable, reliable

Summary

This is the power of Azure Websites PaaS

Use slots and settings to swap between running sites

Deploy from source control for speed and reliability
