# Cleaning up the Application

Troy Hunt

@troyhunt | www.troyhunt.com

Overview

This is a good chance to clean things up

Azure Websites *usually* play nice with well-structured apps

Let's optimize the app for bandwidth costs and user experience

Dealing with Local Machine Dependencies

Machine-specific file paths	GAC dependencies
Installed software	Registry references

What You're Paying for Bandwidth

File	Size (bytes)
bootstrap.css	141,414
Font-awesome.css	26,651
fontawesome-webfont.woff	65,452
jquery-2.1.3.js	247,387
boostrap.js	66,732
Total	547,636

547,636B per visitor

510GB per 1M visitors

Summary

Update framework and package versions – you're going to be testing anyway

Use NuGet for package management where possible

Minimize your bandwidth and speed up your app – it's win-win!
